Advanced Materials

	Warm-curing epoxy system based on Araldite [®] LY 1564 SP* / Hardener XB 3486* / Hardener XB 3487*			
	Araldite LY 1564 SP Hardener XB 3486 (formulated amine hardener) Hardener XB 3487 (formulated amine hardener)			
Applications	Industrial composites			
Properties	Laminating system with low viscosity and high flexibility. The reactivity may easily be adjusted to demands through the combination of both hardeners. The long pot life of XB 3486 facilitates the production of very large industrial parts. The systems are qualified by Germanischer Lloyd.			
Processing	 Resin Transfer Moulding (RTM, SCRIMP) Wet lay-up Filament Winding

storage temperatures they will have the shelf lives indicated on the labels.

Partly emptied containers should be closed immediately after use.

In addition to the brand name product denomination may show different appendices, which allows us to differentiate between our production sites:
e.g., BD = Germany, US = United States, IN = India, etc.. These appendices are in use on packaging, transport and invoicing documents.
Generally the same specifications apply for all versions. Please address any additional need for clarification to the appropriate Huntsman contact.

Processing data

Mix ratio	Components		Parts by weight	Parts by volume
WIIX FALIO	Araldite LY 1564 SP		100	100
	Hardener XB 3486		34	41
			_	
	Araldite LY 1564 SP Hardener XB 3487		100 34	100 41
	We recommend that the components are weighed with an accurate balance to prevent mixing inaccuracies which can affect the properties of the matrix system. The components should be mixed thoroughly to ensure homogeneity. It is important that the side and the bottom of the vessel are incorporated into the mixing process. When processing large quantities of mixture the pot life will decrease due to exothermic reaction. It is advisable to divide large mixes into several smaller containers.

Handling precautions

Mandatory and recommended industrial hygiene procedures should be followed whenever our products are being handled and processed. For additional information please consult the corresponding product safety data sheets and the brochure "Hygienic precautions for handling plastics products" (Publ. No. 24264/e).

Personal hygiene

Safety precautions at workplace	ce	
protective clothing	yes	
gloves	essential	
arm protectors	recommended when skin contact likely	
goggles/safety glasses	yes	
Skin protection		
before starting work	Apply barrier cream to exposed skin	
after washing	Apply barrier or nourishing cream	
Cleansing of contaminated skin		
	Dab off with absorbent paper, wash with warm water and alkali-free soap, then dry with disposable towels. Do not use solvents	
Disposal of spillage		
	Soak up with sawdust or cotton waste and deposit in plastic-lined bin	
Ventilation		
of workshop	Renew air 3 to 5 times an hour	
of workplaces	Exhaust fans. Operatives should avoid inhaling vapours	

First aid

Contamination of the eyes by resin, hardener or mix should be treated immediately by flushing with clean, running water for 10 to 15 minutes. A doctor should then be consulted.

Material smeared or splashed on the skin should be dabbed off, and the contaminated area then washed and treated with a cleansing cream (see above). A doctor should be consulted in the event of severe irritation or burns. Contaminated clothing should be changed immediately.

Anyone taken ill after inhaling vapours should be moved out of doors immediately. In all cases of doubt call for medical assistance.
